

YUKON'S NEXT GOLD MINE

CORPORATE PRESENTATION

April 30, 2024

FORWARD LOOKING STATEMENTS

This presentation contains forward-looking information, which is not comprised of historical facts and is based upon the Company's current internal expectations, estimates, projections, assumptions and beliefs. Such information can generally be identified by the use of forwarding-looking wording such as "may", "will", "expect", "estimate", "anticipate", "intend(s)", "believe", "potential" and "continue" or the negative thereof or similar variations. Forward-looking information involves risks, uncertainties and other factors that could cause actual events, results, performance, prospects and opportunities to differ materially from those expressed or implied by such forward-looking information. Forward looking information in this presentation includes, but is not limited to, the Company's plans for future metallurgical test work; potential future economic studies, potential future advancement and optimization of processing flow sheets, and statements regarding process flow sheet expectations; plans for exploration; and statements regarding exploration expectations, prospectivity of the Company's property interests, mineral resource estimates; mineral recoveries and anticipated mining costs.

Factors that could cause actual results to differ materially from such forward-looking information include uncertainties inherent in resource estimates, continuity and extent of mineralization, capital and operating costs varying significantly from estimates, the preliminary nature of metallurgical test results, delays in obtaining or failures to obtain required governmental, environmental or other project approvals, political risks, uncertainties relating to the estimation of mineral resources and the availability and costs of financing needed in the future, changes in equity markets, inflation, changes in exchange rates, fluctuations in commodity prices, availability of funding, and the other risks involved in the mineral exploration and development industry, enhanced risks inherent to conducting business in any jurisdiction, and those risks set out in Banyan's public documents filed on SEDAR. Although Banyan believes that the assumptions and factors used in preparing the forward-looking information in this news release are reasonable, undue reliance should not be placed on such information, which only applies as of the date of this news release, and no assurance can be given that such events will occur in the disclosed time frames or at all. Banyan disclaims any intention or obligation to update or revise any forward-looking information, whether as a result of new information, future events or otherwise, other than as required by law.

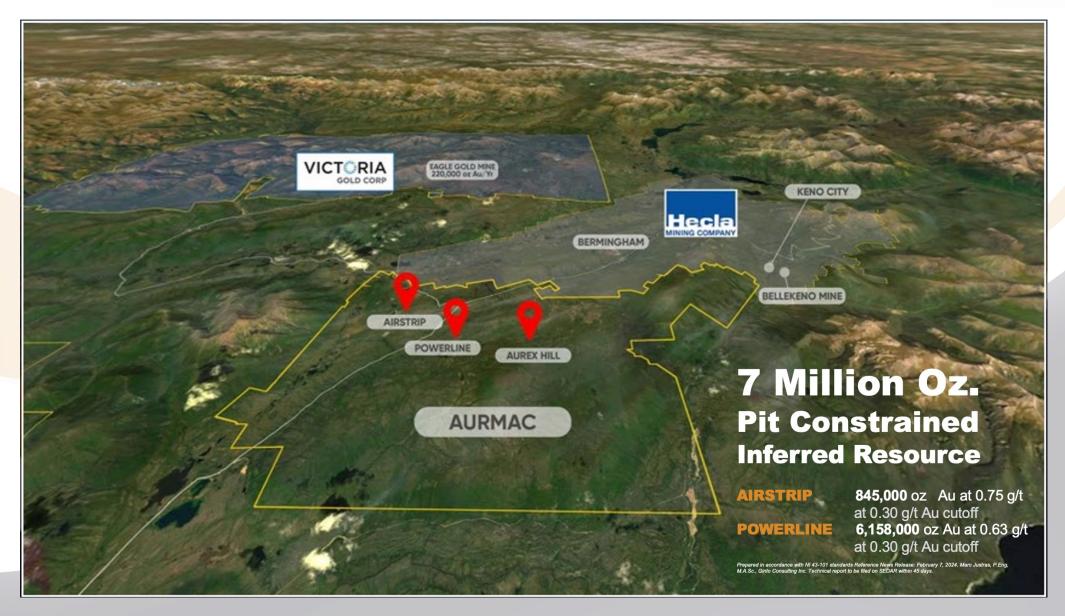

Cautionary Note to U.S. Investors Concerning Estimates of Measured, Indicated and Inferred Resources: This presentation uses the terms "Measured", "Indicated" and "Inferred" Resources. U.S. investors are advised that while such terms are recognized and required by Canadian regulations, the Securities and Exchange Commission does not recognize them. "Inferred Resources" have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all or any part of an inferred resource will ever be upgraded to a higher category. Under Canadian rules, estimates of Inferred Resources may not form the basis of feasibility or other economic studies. U.S. investors are cautioned not to assume that all or any part of an Inferred Mineral Resource exists, or is economically or legally mineable.

Qualified Person:

Paul D. Gray, P.Geo., Banyan's geological consultant, is a "qualified person" within the meaning of such term as set forth in National Instrument 43-101 of the Canadian Securities Administrators, has verified and supervised the preparation of all of the scientific and technical information contained in this presentation.

METALLURGY - ROBUST RECOVERIES

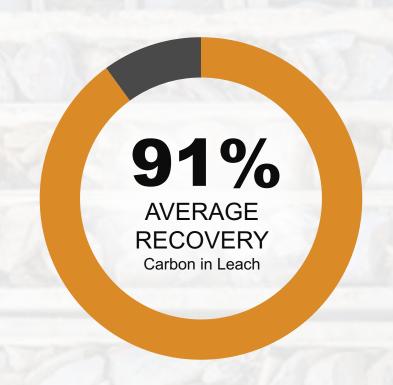

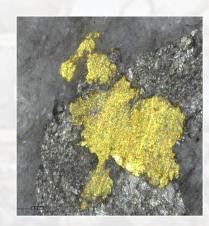

Multiple Conventional Flow Sheets

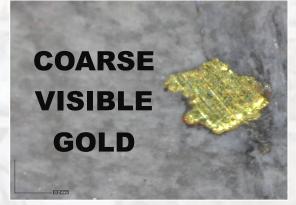

91% gold recovery for the Carbon in Leach ("CIL")/Carbon in Pulp ("CIP") process

Gravity and flotation 84% gold recovery

Heap leach gold recovery estimated to range from 64-72%

Low cyanide consumption

At an average of 0.52 kg/t (P₈₀
 75 μm)

Gravity Recovery

Has shown it may be an effective part of the flow sheet
 53%

Flotation recovery

- Rougher concentrate 89% of gold
- Low mass pull of 3.7%

Environmental

Low sulphide concentration and excess buffering capacity indicates Powerline is non-acid generating

AURMAC – PERMIT ADVANTAGE

AurMac Advantage:

- ✓ First Nation of Na-Cho Nyäk Dun settled First Nation, existing agreements
- ✓ Existing Roads and Access
- ✓ No Key wildlife Areas
- ✓ Existing Hydroelectric Power
- Existing baseline Environmental data
- ✓ Victoria Gold and Hecla data
- ✓ Banyan data since 2021
- ✓ Adjacent to 2 permitted mines potentially faster than stand alon

	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
PEA					
Baseline Studies					
YESAB					
Quartz Mining License					
Construction					
Water Licence					

HUGE VALUE TO MOVE THIS FORWARD QUICKLY

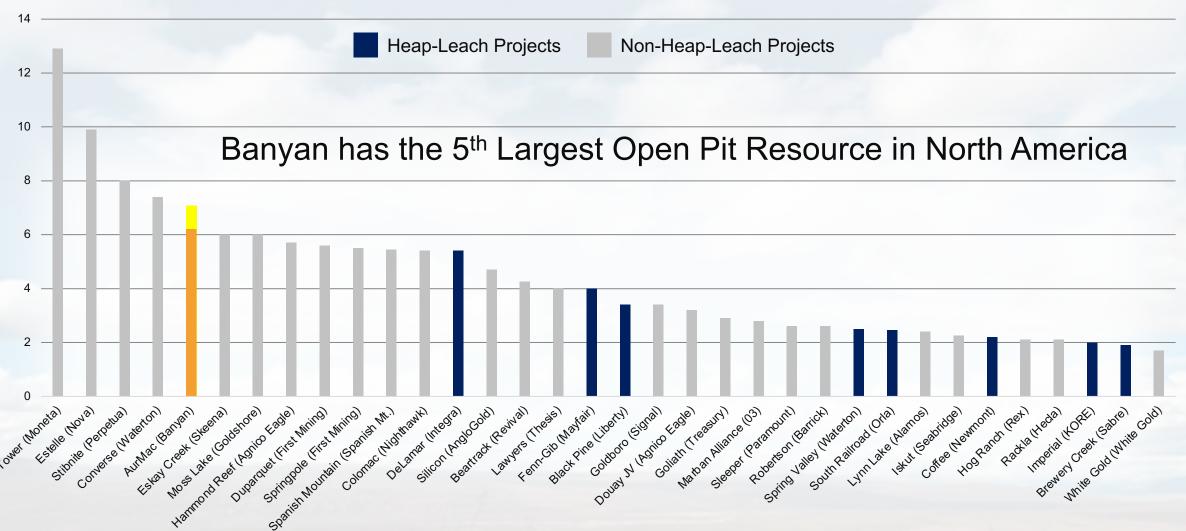

Yukon Advantage:

- ✓ Established Permitting progress
- ✓ Improvement in Assessment Process: earlier start
- ✓ Construction could begin in 4-5 years

RELATIVE VALUATION: BANYAN VS PEERS
